Jobs to Do	Pains & Problems	Objections/Questions	Values/Motives	Identity/Transformation
• Timeline and cost for building his solution • Custom software for his market • Do it for real (tried other solutions) • Build a prototype to deploy to his '.com' in 60 days to sell • Validate product-market fit with real customers • Create defensible competitive advantage through technology • Build foundation that can scale to 1000+ users without rebuild • Automate manual processes his future customers currently struggle with • Generate recurring revenue within 6 months Emotional Jobs: • Feel confident presenting to investors at next funding round Social: • Be seen as innovative disruptor in his industry • Gain respect from technical co-founder types	• He's got 1-shot to get it right • Needs something to sell • Doesn't know who else can do this • Future support (after it's built) • Backups • Stability • Spent 3 months and \$15K on WordPress "solution" that couldn't handle basic requirements • Investor wants to see working product by next quarterly review • Knows 2-3 other startups attacking same problem • Feels disadvantaged without technical co-founder • Feature Creep Anxiety: Struggling to say no to potential customers' requests • Personal savings depleting, considering second mortgage • Can't attract top talent without proven product	• Do you do your own development • How do I know you'll deliver what I need • Do you have referrals (trying to est. trust) • Who provides support/Will you be available • Backup plan • Do you host? • What does hosting cost • Who owns the code? Do you use proprietary frameworks? • When can you have it done...and can it have these 7342 features • How do I know you won't abandon us after MVP like the last dev shop? • Can you help me understand what's technically feasible vs. my wishlist? • What happens if my business model pivots mid-development? • How quickly can we iterate based on early customer feedback? • Will the code be clean enough for future developers to understand? • How do we handle IP and confidentiality with my trade secrets?	• Knows his customer extremely well • Knows why his customer will choose his solution over others • Moving fast • Gambler (Putting it all on the line) • Entrepreneur • Fully-committed (left previous job) • Unlimited ideas • Highly-social • They are the party • Access to capital • Looks sleek, modern and expensive • Speed over Perfection: 80% solution today beats 100% solution next quarter • Customer Obsession: Will talk to 100+ customers to validate • Capital Efficiency: Every dollar spent must drive revenue or learning • Network Leverage: Believes relationships are everything • First-Mover Advantage: Speed to market is critical • Data-Driven: Wants analytics on everything	• Be the next Mark Cuban • B2B SaaS success • The BEST salesperson • Afford more FUN • Chief fundraiser • Winner • Made it look easy • Best-in-class solution • Sell it in the future • Recognized thought leader with working product • CEO of fast-growing SaaS company • Someone who "made it" without traditional advantages • The person others come to for advice • Building generational wealth for family • Living proof that betting on yourself pays off

Transformation Profile

Demographics

- 40-yr-old Biz owner w Board of Directors (purchased biz)
- Original board-directed tech partner, Inherited a mess

- Decision maker (subj. to board approval); MBA, understands business not code
- Company Size: 30-75 employees

- Annual Revenue: \$5M-\$25M
- Years in Current Role: 2-3 years
- Industry Type: B2B service or SaaS

- Board Composition: 3-5 members, mix of investors and industry vets
- Tech Team History: 3 different vendors/teams in 5 years

Jobs to Do	Pains & Problems	Objections/Questions	Values/Motives	Identity/Transformation
• Keep the business up and running (while you work, fix, transfer) • Don't be a time suck on Tim (why he's not hiring internal) • Meet budget requirements • Fix our current mess/Add this fundamental feature • Fast execution • Stabilize current platform while maintaining operations • Reduce tech debt w/o disrupting revenue • Meet board's growth targets despite tech • Reduce customer churn caused by bugs Emotional Jobs: • Stop dreading customer escalations • Feel confident in tech discussions with board • Reduce Sunday night anxiety about Monday's problems • Restore pride in product quality • Stop feeling held hostage by current tech vendor Social Jobs: • Regain credibility with board after previous tech failures • Be seen as turnaround executive who fixed the mess • Earn respect from technical team members • Become case study for successful tech transformation	• Losing traction and falling behind competition • Money hasn't solved his problems with existing partner (wasting \$) • Loss of trust with current partner • Slow site with lots of bugs • His staff or customers complaining • Lacks a long-term partner • Sync issues • System crashes during peak usage, no one answers • Current vendor points fingers, never takes responsibility • Simple changes quoted at \$50K and 3 months • Top 3 customers threatening to leave Competitors launching features Tim can't match • Each month, problems compound • One board member openly questioning Tim's leadership • Best employees leaving due to tool frustration • Can't connect to modern tools customers expect	• What are budget requirements • How long will this take to fix • Tech stack questions • Is it worth changing tech stacks • What's it gonna cost, what will it get me • How disruptive would a transition be/ What will that look like • Will my team have to learn something new • What does our working relationship look like (debugging, response time) • Will we have to start from zero to explain how it all works (Tim's personal time) • Will this cost me customers/users • Migrate without losing customer records? • Experience with [sp. industry] compliance reqs? • Work with existing team during trans? Handle political dynamics w/current vendor? • Disaster recovery & BCP? • References from similar migrations? • Minimize sales team disruption? • Timeline/budget guarantees? • Documentation for future transitions?	• Dependable • Trustworthy • Calculated and safe • Nimble and quick integration • Speed to respond to market • Informed and up-to-speed • Risk Mitigation: Cannot afford another failed transition • Incremental Progress: Small wins build confidence • Transparency: No surprises, especially bad ones • Predictability: Wants boring, reliable technology • Cost Control: Every dollar is scrutinized • Knowledge Transfer: Never wants to be held hostage again • Vendor Partnership: Seeks true partner, not just service provider	• Bright future for the business full of opportunity • Guided company to solid ground • Successful owner/CEO • Happy staff • Delegation to staff (less fires to put out bc of tech) • Proven Growth Leader • Wise investor • Confident leader who solved the "unsolvable" problem • Board's golden child who delivered results • Executive with proven turnaround track record • Mentor to other executives facing similar challenges • In control of technology destiny • Positioned for next career move (CEO of larger company)

Trigger Events and Buying Signals

Bobby Notebooks

- Just closed funding round
- Competitor raised Series A
- Key customer said "I'd pay for that"
- Partner/spouse gave ultimatum about timeline
- Found product-market fit through customer discovery

Tim Tables

- Major customer threatened to leave
- Board meeting where tech was main topic
- Current vendor raised prices 40%
- Failed launch of critical feature
- New competitor eating market share

Decision Criteria

Bobby Notebooks

- Speed of initial prototype (30-60 days)
- Total cost to MVP (<\$100K)
- Team's relevant industry experience
- Flexibility for pivots
- Long-term partnership potential

Tim Tables

- Migration risk mitigation
- References from similar companies
- Clear transition timeline
- Cost predictability
- Post-migration support plan

Bobby Notebooks

- “Move fast and break things”
- “Product-market fit”
- “Burn rate”
- “Hockey stick growth”
- “Disrupt the industry”
- “MVP”
- “Iterate quickly”
- “Customer validation”

Tim Tables

- “Stop the bleeding”
- “Technical debt”
- “Mission critical”
- “Risk mitigation”
- “Vendor lock-in”
- “Stability”
- “Predictable costs”
- “Board confidence”

Your Core Message (Sample)

The stakes couldn't be higher when choosing a development partner for your custom software needs. Simply going with the cheapest hourly rate becomes your most expensive mistake.

But custom software shouldn't force you to choose between fast-and-buggy or quality-and-bankrupt.

Fixation believes your business deserves technology that works when it matters most. You shouldn't wait days to get a response from offshore teams. Most of all, your product and IP should never be hostage to a vendor's proprietary framework.

That's why Fixation learns your business first, then applies rock-solid architecture and bleeding-edge AI expertise that eliminates technical debt before it starts.

Imagine 14 US-based developers who work on your sleep schedule, deliver visible progress through weekly demos, and build solutions you completely own.

No proprietary lock-in. No overnight disasters. No explaining why everything that worked yesterday is broken today.

Choose Fixation. Own your software. Own your future.
